

Phase 1: Problem And Use Cases

Document type: buyer problem framing and use-case inventory.

Core Problem

Small government contractors are asked to prove readiness, but the work is scattered across contracts, spreadsheets, shared drives, email, and individual memory.

The buyer does not only need a list. They need an operating view of:

- What applies.
- Why it applies.
- Who owns it.
- What evidence metadata exists.
- What is overdue or blocked.
- What can be reported without overclaiming compliance.

Priority Use Cases

Use case	Current pain	App-aligned demo path
Contract readiness intake	Contract metadata and clauses are tracked manually.	Contracts tab -> contract form -> Attached clauses.
Clause-to-obligation tracking	Requirements are copied into spreadsheets without source context.	Contracts tab -> attach mapped clauses -> Obligations tab.
Owner assignment	No one knows who owns each obligation.	Obligations tab -> View details -> Assign by.
Workflow status	Readiness status is stale or subjective.	Obligations tab -> Update status -> Save status.
Evidence organization	Evidence exists but is hard to connect to obligations.	Evidence tab -> Evidence metadata -> Obligations (optional) and Controls.
Reporting	Reports are rebuilt manually for each request.	Reports tab -> Compliance Status, CMMC Readiness, Subcontractor Compliance, or Evidence Package.
Auditability	Changes are not traceable.	Settings tab -> Audit log.

Pain Statements To Test

- "We track this in spreadsheets, but nobody trusts the spreadsheet."
- "We know evidence exists, but we cannot quickly show what it supports."
- "Readiness depends on one person knowing where everything is."
- "We need to prepare for reviews without pretending the tool certifies us."
- "We need a No-CUI workspace because we are not ready to put sensitive content into a SaaS product."

Claims To Avoid

- "GCCS proves compliance."
- "GCCS certifies CMMC readiness."

- "GCCS stores CUI."
- "GCCS replaces an assessor or attorney."
- "GCCS automatically determines contract obligations without review."
