

Phase 1: Ideal Customer Profile

Document type: ICP definition for founder-led discovery.

Required boundary: target customers must be able to use synthetic, redacted, or non-sensitive data during the MVP pilot.

Primary ICP

Small U.S. government contractors and subcontractors that manage compliance readiness through spreadsheets, shared drives, email, and informal ownership tracking.

Best-Fit Signals

- Small business with federal or defense contracting exposure.
- Preparing for CMMC-related readiness, contract review, evidence organization, or flow-down management.
- Has a contract, subcontract, or synthetic workflow suitable for a No-CUI pilot.
- Has an internal owner who can attend kickoff and end-of-pilot review.
- Currently lacks a clean way to answer what applies, who owns it, what evidence exists, and what remains open.

Buyer Personas

Persona	Pain	FeDril angle
Owner / founder	Needs readiness visibility without becoming the compliance project manager.	Show dashboard, open obligations, owner assignment, and reports.
Operations lead	Tracks work across spreadsheets and people.	Show obligation work queue, status, due dates, and evidence metadata.
Contracts lead	Needs to connect contract clauses to follow-up work.	Show Contracts tab, attached clauses, and source-backed obligation generation.
Security lead	Needs evidence organization and readiness status without storing real CUI.	Show Evidence tab, No-CUI acknowledgement, metadata fields, and report artifacts.
Advisor / MSP	Supports multiple small contractors and needs repeatable workflows.	Position as a pilotable operating workspace, not enterprise GRC.

Disqualifiers

- Requires real CUI upload or processing in the MVP.
- Expects FeDril to certify CMMC compliance.
- Wants legal, accounting, labor, contracting-officer, or assessor determinations.
- Needs custom integrations before proving value.
- Cannot commit a named internal pilot owner.

Hidden Risks

- Some buyers will say "readiness" but expect certification. Redirect immediately.
- Advisors may want multi-client features before one customer workflow is proven.

- Contractors may accidentally paste sensitive details into descriptions. Reinforce No-CUI boundaries during discovery and demo.
